Caltech Search Committee

October 13th, 2023

The Division of Physics, Mathematics and
Astronomy
1200 E California Blvd
Pasadena, CA 91125
physics-search@caltech.edu

Dear Search Committee,

I am attaching my application for the job position at Caltech: "Faculty Position in Experimental or Theoretical Physics". I found this position through InspireHEP Jobs Website. I obtained my Ph.D. in Physics from the University of Chicago in 2018 and am currently a postdoctoral scholar employee at the University of California, Santa Cruz, working on the ATLAS Experiment. I am thrilled at the prospect of bringing my experience as a member of the ATLAS collaboration, my dedication to probing the fundamental questions of the Standard Model, and my passion for communicating my knowledge to The Division of Physics, Mathematics and Astronomy Caltech, and to the CMS experiment. My career in physics represents a commitment to the core values that Caltech shares: diversity, equity, and inclusion. In my diversity statement, I describe my unique background as a Deaf human in an oral world and how that shapes my passion for community outreach. In teaching, I make my classes accessible to students from all backgrounds to inspire the next generation of scientists. And in research, I work to provide a safe and inclusive environment so that my students, mentees, and colleagues can collaborate and foster new ideas. If appointed, my research program will be focused on searches for new physics with the CMS experiment, instrumentation upgrades to support the completion of the HL-LHC physics program, and software development to meet the computing challenges of particle physics over the next decade.

At UChicago and UC Santa Cruz, I have been mentoring undergraduate students and graduate students across all of my research projects in hardware, software, and physics. Under my tutelage, I guided students through their physics analysis, supported them through struggles in their work-life balance, and worked with them to achieve their personal goals. For example, I am proud to mentor one such graduate student, Dr. Jacob Pasner, who graduated from UCSC in 2019 with his Ph.D. on a search for boosted Higgs bosons. He finished his AAAS Fellowship in Washington, DC. I am also active in outreach activities, from giving international plenary talks to students in physics on how to advocate for their education and introducing LHC physics to local high schools through the QuarkNet program. And finally, I was an active participant in the most recent Snowmass community effort to study the prospects of future colliders. My goal is to ensure a broad scope of work for myself and my students and continuity beyond the completion of the LHC program.

Over the next decade, I plan to continue my close collaborations with various institutions and labs, including UChicago, UCSC, UCLA, UC Riverside, and IRIS-HEP, to support my research program of searching for new physics Beyond the Standard Model. In particular, I plan to search for light supersymmetric particles, dark matter candidates compatible with astrophysical and cosmological measurements. At Caltech, I am excited to work closely again with the physics faculty and know all of you as scientists and humans. I did my undergraduate at Caltech in Ruddock House (now renamed to Venerable) so I am rather excited to have the chance to be back again. Finally, you will notice that I included a picture and my pronouns on all material (except this letter). As a Deaf physicist, I am a very visual learner, and this should help you associate my story to my face. I am happy to provide any additional material upon request.

Sincerely,

Giordon Stark (pronouns: he/him/point)

Enclosed: curriculum vitae, Statement of Teaching, Statement of Research, Statement of Diversity, list of publications, five Letters of Reference
